US Patent No. - PN (1):  
6398962

Detailed Description Text - DETX (11):

(c) solidifying the mixture through the sol-gel  
transition, whereby a gel is  
prepared which has three dimensional interconnected phase  
domains one rich in

solvent the other rich in inorganic component in which surface pores are contained;

Claims Text - CLTX (4):

c) solidifying the mixture through the sol-gel transition, whereby a gel is prepared which has three-dimensional interconnected phase domains, one rich in solvent and the other rich in an inorganic compound in which surface pores are contained;

Current US Cross Reference Classification - CCXR (1):

210/198.2
